Extruding machine

🌀 Painting

PROFILE

**makor**

PROUDLY MADE IN ITALY

# TF/P

## Silent energy

Realized to apply in continuous filler and paints on mouldings, picture frames with the extruding system through a steel counter template properly shaped.

- Metal sheet structure and steel tubular. High
- technology transmission to avoid maintenance and minimize the noise. Forward feed by lower metal rollers and upper rubberized pressure wheels, variable speed adjustable by inverter. Pressure wheels independently movable crosswise. Coating: extruding head complete with inner pressure wheels, connections for counter templates.

- ✓ Coating with no waste
- ✓ Sturdy and powerful transport with 6 motorized pressure units
- ✓ Various application heads for a successful result even with products suitable to fill and repair defects
